

Mr. Alessandro Bettin is a civil engineer (MSc) with more than 25 years of professional experience in the water sector. From the early nineties he has actively been involved in the adaptation and dissemination of new technologies aimed at the improvement of water and wastewater networks and saving of water resources. Throughout his career, he has managed several international projects in the field of leakage management, urban drainage, river and coastal hydraulics and adaptation to climate change. He has developed extensive experience in managing EU funded projects in the sector of research and technological development. He is currently Business Development Advisor for the water sector at Hitachi Drives & Automation.
